

Nov 22

ay - -

Dayton Ohio 1880.

Dr. Engelman:

Dear Sir, - in close you will find a specimen belonging to the genus Euphorbia and one to the genus Vitis. As you no doubt are aware of the difficulty a botanist has with these genera, perhaps you will be kind enough to name them for me, although a stranger. I can not classify these two specimens with certainty.

Respectfully
A. Forster.

I have put the specimen into such a shape

that you can reconstruct the leaf of V. and plant of Euphorbia.
